Background

Rationale

For a number of years now, different development cooperation actors have been struggling on how to best integrate climate change, environmental issues and disaster risk reduction into their planning and operations. As a result, many mainstreaming toolkits, guidelines and manuals have been developed by various agencies - including from SDC. But what are the results and impacts of all these so-called 'mainstreaming' efforts? What is required to make sure that the term 'mainstreaming' doesn't remain just a buzzword? The event wants to shed light into such challenging questions and explore possible answers or pathways to better 'walk the talk'.

What to expect

The event will provide a critical and multi-faceted review of mainstreaming experiences from around the world including good practices and failures. It will consist of inspiring presentations, interactive sessions and provide opportunities to connect and exchange.

Target audience

The primary target audience are the Swiss based members of the two thematic networks of SDC tackling climate change, environment and disasters. The event is oriented towards a variety of partners related to development cooperation comprising practitioners of different origin, NGOs, private sector representatives, and academics.

Organizers

The two thematic networks of SDC 'Climate Change & Environment' (contact: daniel.maselli@eda.admin.ch) and 'Disaster Risk Reduction' (contact: nadia.benani@eda.admin.ch) are the initiators of this event. They are supported by INFRAS in organizing the event.
